

Cardinal

Cardinal is a digital sign-in system for events and activities. Created by St. Andrew's School students, Cardinal improves a regular procedure for both faculty members and students. Cardinal utilizes the preassigned four-digit student ID number to identify the student. It replaces the outdated method of signing in through paper and relieves faculty members of the hassle of printing out the sign-in sheet and manually checking for missing students. With Cardinal, the list of missing students is instantly presented at the end of the sign-in, and it is impossible for a missed sign-in to be overlooked. As of now, the target audience of Cardinal is purely the students of St. Andrew's School. However, if the practicality of Cardinal is able to be demonstrated, the vision may be expanded to students at other schools in the future.
